

Radiologic Technologist - 647

Scans Completed:

- Scans are completed in compliance with the applicable protocol, including proper patient consent.
- Scans are completed in accordance with professional guidelines, thus minimizing the need for repeated scans

Patient Health and Safety

- Patient informed consent and medical screening forms are consistently completed appropriately.
- Based on review of patient's medical screening form, immediate notification is provided to Investigator/Physician of contraindications.
- Select nursing duties are in accordance with standard medical practices, including assurance of patient identification and confidentiality.
- Activities are carried out in compliance with JCAHO standards.

Equipment Operation

- Quality assurance assessments are performed, as specified for assigned equipment, to ensure proper functioning and to ensure early identification and resolution of problems.
- Procedures are developed and staff are trained in the proper use and maintenance of equipment.
- Imaging equipment is regularly assessed and maintained to minimize downtime.

Research Protocol

- Accurate and complete patient and experiment log and image archives are consistently maintained. Paperwork necessary for research protocols is also consistently maintained.
- High quality scans/images are provided in support of investigator's research and publication.

Professional Expertise and Training

- MR technologist certification standards are maintained by participating in continuing education programs.
- New in-house MRI technical developments are consistently monitored and incorporated into scanning protocols as necessary.
